

Supported Printer FAQ

HSS still recommends the same BASE printer, currently **Lexmark E360d, E360dn, E460dn**. These are the only printers available for our Caldera Legacy product.

However Our PCI-Compliant CentOS product is open to USB and Network printing.

HSS and its employee's only recommend the above printers; however our customers are continuously successfully selecting and implementing other printers all the time.

This new PCI-Compliant CentOS platform supports most **Industry Standard Business Class** mono laser printers. They should emulate HP LaserJet-compatible printers that implement PCL 3, 4, 5, or 6. (Most Should)
Printers should be no more than Two years old.

HSS cannot however be responsible if other selected printers do not function for any reason.

HSS can only know the results of the printers previously tested.

It is HSS Policy to charge a printer setup fee for those printers not purchased from HSS. This does not imply or guarantee success with unknown printers. Additional time outside of normal setup times may need to be charged at an hourly rate.

Below is a list of printers that our customers have successfully used with the New CentOS product. **(This is not an endorsement)**

Brother	MFC-8460N	
HP	LaserJet 4000	(Obsolete, Not Recommended)
